Einladung zum Vortrag

am

Montag, den 17.09.2012 um 14.00 Uhr c.t.
im Raum 307 (Robert-Mayer-Str. 11-15)

hält

Herr Alejandro Lopez-Ortiz
(school of Computer Science, University of Waterloo)

einen Vortrag mit dem Titel:

Titel: Competitive Analysis for Caching and Paging

Abstract:

The competitive ratio has served as a practical measure for the study and classification of online algorithms. Notwithstanding the wide applicability of competitive analysis, it has been observed by numerous researchers that in certain settings the competitive ratio produces results that are too pessimistic or do not fully reflect practical experiences. In this talk we consider various alternatives currently available in the field and discuss their contrasting strengths and weaknesses.
